AUTHOR: Jethon, Zbigniew

TITLE: Rescue operations in space

PERIODICAL: Astronautyka, no.2, September 1962, 6-8

TEXT: The fear of an accident affects the state of mind of a cosmonaut; the capsule may be damaged during any of the phases of cosmic flight. After the launching stage the greatest danger comes from a possible capsule puncture by micrometeorites. The space suit serves as a second capsule but does not protect against radiation or micrometeorites. Some space suits are made of metal, others from a special cloth, some are provided with radiators to regulate the dissipation of heat. The gas should be supplied to the whole under-suit region, together with the head. The pressure of the gases should not exceed one third of the atmospheric pressure because of the difficulties encountered in hermetization of the seams. The problem of organizing emergency rescue parties that could reach a space ship in distress with a maximum speed and carry away the crew is under discussion. There are 5 figures.

TITLE: Space suits

SOURCE: Astronautyka, no. 2, 1965, 8-9

TOPIC TAGS: space suit, space flight, astronaut safety, cosmic ray, oxygen supply

ABSTRACT: The problem of the safety of astronauts during space flights is discussed. The main danger that an astronaut encounters during space flight is a lack of oxygen, and the possibility of damage to the cabin due to small meteorites. The purpose of space suits is to create an environment around the body of the

Belgrade, Srpski Arhiv za Celokupno Lekarstvo, Vol 90, No 12, December 1952, pp 1241-1244.

Abstract: Authors' English summary A patient suffering from strongyloidosis with high eosinophile count, leukocytosis, and marked gastrointestinal disturbances was treated with dithiazanine iodide. Ten days of such treatment was insufficient for complete cure. Both clinical and parasitological cure was effected only after the second period of treatment, which also lasted 10 days.

"Our Experiences in the Treatment of Tropical Disease"

Belgrade, Srpski arhiv za celokupno lekarstvo, Vol 93, No 9
Sep 65, pp 831-838.

Abstract /Authors' English summary/: During the last three years the authors studied 4 cases of bancrofti-filariasis, 1 case of onchocercosis, 29 cases of schistosomiasis, 2 cases of autochthonous and 1 case of imported kala-azar, 42 cases of strongyloidosis, 53 ankylostomiasis, and 1 case of autochthonous and 8 cases of imported malaria. The authors suggest faculty training in tropical medicine at all Yugoslav faculties of medicine, and a systematic examination of all foreign students as well as Yugoslav citizens, coming from tropical countries. 3 Yugoslav, 7 Western references.
